ASTERION
SPACE

ASTERION

SPACE

Asterion Space takes virtual citizenship into a new dimension. The virtual world is a decentralized community where everyone is in control of respective issues, and interactions and transactions are powered by distributed computing and blockchain.

The platform is open source, and deploys smart contracts to empower every individual in the voting process. Each token is priced at USD1, and proceeds will go towards developing the virtual world and promotions.

Managed in partnership with Asterion Space, the bank will handle all the resources of users. Given the history of Asterion Space and trends in bitcoin cryptome, Investors will be happy to know they have the opportunity to value their resources a thousand times over. It is predicted that the value of the Asterion or square meter token in this world may be several thousand dollars in the future.

At Asterion Space, our vision and mission are to do something new and inventive today. We are creating and realizing a new strategy for the trajectory of humankind.

The Asterion Space is for everyone who wants to be part of something new, something revolutionary. We accept all innovators with open arms. Here, we believe that Civilization has reached a collective understanding of the value of human capital, as well as the creative power of personality in the development of a new society.

Executive Summary

Executive Summary - At Asterion Space, our vision and mission are to do something new and inventive today. We are creating and realizing a new strategy for the trajectory of humankind. The Asterion Space is for everyone who wants to be part of something new, something revolutionary. We accept all innovators with open arms. Here, we believe that Civilization has reached a collective understanding of the value of human capital, as well as the creative power of personality in the development of a new society.
At Asterion Space we believe that change cannot be achieved by fighting existing reality but by creating a newer, more efficient model. This understanding will be reflected in the new, post-industrial community basis of the future.

Asterion Space is an open-source initiative to build a virtual reality world. It uses blockchain technology to claim and transfer virtual land, keeping a permanent record of ownership and will enable to create virtual communities in the near future. A public Virtual Reality world should be ruled by open standards, shielded from the agenda of any central organization.

A public virtual reality world should be ruled by open standards, shielded from the agenda of any central organization. In Asterion, users are landowners and have full control over the content of their land. To make this possible, Asterion uses blockchain technology as a permanent, immutable record of ownership.

Blockchain Technology

- is the world's leading software platform for digital assets. Offering the largest production blockchain platform in the world, we are using new technology to build a radically better financial system. Our software has powered over 100m transactions and empowered users in 140 countries across the globe to transact quickly and without costly intermediaries. We also offer tools for developers and real-time transaction data for users to analyze the burgeoning digital economy.

Blockchain is an expanding list of records called blocks, which are linked and secured using cryptography. Each block typically contains a hash pointer as a link to a previous block, a timestamp and transaction data. By design, a blockchain is inherently resistant to modification of the data. It is an open, distributed ledger that can record transactions between two parties efficiently and in a way that is permanent and can be verified. For use as a distributed ledger, a peer-to-peer network typically manages a blockchain. Collectively, this adheres to a contract that validates new blocks. Once the new block is recorded, the data in any given block cannot

be altered retroactively without the alteration of all subsequent blocks, which requires collusion of the network majority.

One of the greatest, and perhaps most unused abilities of the blockchain technology are the incentive to contribute computing power through cryptocurrency.

Blockchains are made to be secure by design. This is a typical example of a distributed computing system with high Byzantine fault tolerance. Decentralized consensus has therefore been achieved with a blockchain. This makes blockchain potentially suitable for the recording of events, medical records, and other activities, such as identity management, transaction processing, documenting provenance, food traceability, or voting and all these can be done without a third party or central server. The bitcoin design has been the inspiration for other applications.

Our Idea

Asterion Space is an open-source initiative to build a virtual reality world. The founding Asterion idea is to provide a community with a decentralized power, putting you in control of all several issues in a fair and secure manner.

With blockchains being the full-blown backbone of virtual worlds, it protects and manages the system, currency, assets, identity, and governance of the virtual worlds before doing the same in the real world. Which is where I think we will end up in the real world eventually; it's just a matter of which goes first and how long until it's the case for both.

Blockchains are a shared version of reality everyone agrees on. So whether it's a fully captivating virtual reality experience, amplified reality, or Ethereum or Bitcoin in the physical world used as a journal for the real world, blockchain can be increasingly trusted as our basis for reality.

Asterion Governance

- Asterion decentralized governance will be mainly responsible for facilitating decision process within the Asterion Community. With the absence of a central authority or an omnipotent group of developers or owners, the decision-making process within Asterion community must be moderated through a distributed mechanism.

Asterion is a platform, realized and deployed with a Smart Contract that enables each owner of Asterion to vote in the process. Asterion Tokens holders can contribute in this process.

Prerequisite for voting is Proof of Trust, deliberately locking part or whole of their ATR Tokens balance. By so doing, voters can participate in the voting process by showing their trust in the Token and the Community.

The idea is to create a community of decentralized power to decide about every important issue in fair and safe manner.

The second aim of Asterion decentralized governance is to enable raising funds for development of our virtual world and promotional purposes.

Token

-Asterion world will offer a unique opportunity to combine virtual entertainment with real investment and entrepreneurship. Regardless of individual aggregate wealth, everyone has equal rights in our world. The decentralized nature of the bitcoin will underscore our governance system. Instead of releasing a new blockchain we have decided to use the most powerful and decentralized computing power on earth, which is Bitcoin and its blockchain. ATR token is using the ethereum technology, which is the open-source framework for digital money. Asterion Foundation issued 130,000,000 ATR tokens. There will be never more tokens created.

ATR TOKEN PRICE

$2000

BUY TOKEN

SOON

To acquire Asterion Token, you need to, first of all, go through the following process:

➢ Get an Asterion Space account.

To get started with your system, you will be required to make an Asterion account. Once the account is made and approved, you now become an official citizen of Asterion Space and become eligible to get ATR Token.

➢ Pay With BTC or ETH

Pay with Bitcoin: You can send Bitcoin payments directly to the Asterion Fund on our platform to get started with acquiring ATR Tokens. With the Bitcoin, we will create your Asterion wallet, where all currency will be safely and securely stored. If you prefer a custom route, you can create your wallet and send us the wallet code.

➢ Get your ATR Token
Receive ATR Tokens: We will send ATR tokens directly to your wallet. It's as easy as

that. You are now a participating citizen of Asterion Space.

ATR Wallets- Send and receive transactions and manage your Asterion tokens with our wide range of wallets. You can use various wallets to store you ATR Token. At Asterion, we have the online desktop Google Chrome https://metamask.io/

Asterion World Citizenship

- At Asterion World we take the whole idea of Virtual Reality World Citizenship to a whole new level. The system of citizenship will impact significantly in the industry of virtual and social worlds. All the citizens of Asterion will have the right to vote and be a part of the Asterion world governance. Regardless of how wealthy an individual is, everyone has equal rights ensuring free and fair governance.

Ethereum

- is an excellent choice for the decentralized governance system because of its decentralized nature. Each package includes virtual and physical items, which will be useful in the upcoming Asterion Virtual World. The crowd sale will last until all tokens are distributed. In case all tokens will be sold, we will still allow the purchase citizenship but without ATR tokens.

Asterion World Technology Stack ➢ Blockstack

With Blockstack, users get digital keys that let them own their identity. They sign in to apps locally without remote servers or identity providers.

The storage system of the Blockstack enables users to provide their own storage allowing individuals total control of their data. The data is then encrypted and shared easily between applications.

Blockstack uses Bitcoin and other crypto-currencies for simple peer-to-peer payments. Developers can charge for downloads, subscriptions, and more.

➢ IPFS

IPFS is a peer-to-peer information bank protocol that makes the web more efficient and open. It brings the possibility of high volume data distribution with high efficiency without duplication hence, saving storage space.

All of the blocks within each file has an individual fingerprint known as the cryptographic hash. IPFS erases all copies across the network and traces history versions for all files. Every network node stores only interested contents and other information pointers that can help in figuring out which individual is data and determining the content of the data.

When searching for files, you're requesting that the network should find nodes and store the content in an individual hash. All files can be located by human-readable titles with the aid of a decentralized naming system known as the IPNS.

➢ A-frame

A-Frame is an open-source web framework used for creating virtual reality (VR) experiences. Mozilla and the WebVR community primarily maintain it. It is a single framework component system for Three.js. Here, the developer creates webVR and 3D scenes using HTML. This provides a recognizable authoring tool for the web designers while associating a prominent gaming development pattern that engineers use.

Although Bitcoin was formally produced to be a currency, its scripting language allows you to store small amounts of metadata on the blockchain, which can be used to represent asset manipulation instructions

With the continuous development of the open source community, a chain of stakeholders came together with the realization that in the future, the entire business process will be transformed by the blockchain. They believe that this business process transformation will happen after standards have been formed around each aspect of the stack.

The entirety of the Ethereum project taps into the largest, most blossoming cryptocurrency ecosystem worldwide hence, Bitcoin. Bitcoin creates a blockchain agnostic framework for digital-currencies that will apply those best practices to traditional finance.

The real money market economy-

Civilization has reached a collective understanding of the value of human capital, as well as the creative power of personality in the development of a new society. This understanding will be reflected in the new, post-industrial community basis of the future.

At Asterion World, we offer rare opportunity to combine virtual entertainment with real investment and entrepreneurship. Some examples of how participants are investing in Asterion include investing in your profession, land areas, services, malls, banks, public services, Asterion land deeds and more information on other options coming shortly and would be announced on the site.

Asterion World Roadmap- At Asterion, we have a vision to build something never done before. Because of the project complexity, we have created simple roadmap to see where we are heading.

- Asterion Website - Q1 2017 - Project website launch

- Asterion World Token - Q2 2017 - Pre-sale ATR Tokens Community Fund

- Start Asterion Token - Q1 2018 - Vydáno celkem 450.000 ATR Tokenů

- Ethereum Blockchain - Q1 2018

- Market entry - Q1 2018 - ForkDelta

- First Asterion VR Application - Q2 2018 Asterion Token Flow (Company digitization)

- Asterion World Beta - Q2 2019

Conclusion

- Here at Asterion, we are ambitious ready to accomplish a lot in the months to come. We work towards the development of an international community by creating a Virtual reality Asterion citizens social network, creating of Avatar Software, development of business incubator and the launch of the Asterion World University. We also work towards an award ceremony for the Asterion Space launch.

Asterion Space (product) - Virtual space based on blockchain.

- Parallel life, a second chance for life, leaving behind a track or record. How valuable the world's historical monuments or traces of ancestors are today. And this is our goal. There should be a virtual immortality, including the foundations and contents for artificial intelligence.

- Virtual reality - using 3D glasses and the possibility to look into the Asterion space. It will show the entire planet of Asterion. Using 3D camera, you can insert virtual content into Asterion Space. Visualize my business or services. 3D visit. Everybody gets instructions and technical parameters how to create such a video. Alternatively, we can create a custom order.

- Citizenship - the opportunity to be an official part of the emerging community and Asterion's parallel world. Voting.

- Possibility to be Asterion Guard (partner or substantial person in Asterion)

- Internal use of the ATR currency.

- Presentation Avatar - Presents a project, company or person. The software in which you create Avatars and give them what to do.

- The ability to implement on your own site.

- Recording Avatar - Software in which you create your identity and share your experience or information in the central brain. Great use for different industries.

- Adding your own project with the possibility of getting a grant from citizens. New style of subsidies.

- Clone owns the company into this space.

- Custom tokenizations see Asterion Services - Services from A to Z, global promotion. The best security features for Token. Safe, MetaMask. Securing both the token and the identity and space. We place great emphasis on that.

- Every citizen has the ability to buy the Tokens of others to support or be part of the projects.

- The ability to create your own communities.

The potential of Asterion Token.

OUR SERVICES NOW

Comprehensive services for digitization or so-called tokenisation of companies including PR and exchanger.

Token- by agreement, we create a corporate token and verified source code. (ERC 20)

Listing of our services

As an Asterion citizen, you have the ability to clone your company into Asterion Space, or use our services to create our own company.

- Clone (digitization) of the company or person to Asterion Space

- Project creation (basic elements)

- Create your own token

- BlockExplorer

- Token verification

- Wallet - Metamask, Trezor

- Github

- Bitcointalk

- PR Asterion Space and World Media

- Creation of ICO

- Create White paper

- Listing into exchangers

The big bang of Asterion Space

Asterion Space Introduces Product that Helps Virtual Citizens Manage their Digital Assets

Tokenization product helps businesses manage their assets and grow their virtual brands

BIG BANG of ASTERION SPACE (July 1, 2018) – The future of land ownership is virtual and Asterion Space, an open-source initiative to build a virtual reality world, is leading efforts to use virtual reality to build the communities of the future. Today, Asterion Space takes virtual living one step forward by introducing Token Flow, a unique product that allows companies convert their physical assets into digital.

Tokenization is the next step in creating a virtualized civilization. Through tokenization, users can convert rights to an asset into a digital token on a blockchain. The "real world" contains a variety of assets, including stock and real estate. Many of these assets are difficult to physically transfer. Through Asterion Space's Token Flow, businesses can use this product to work with other companies, transfer assets, create a solid foundation for their business or further develop their results.

"Next steps are behind us and others ahead of us," says Paul AG, co founder. "As a citizen, you can get citizenship using the tokens

that feature every virtual space of m2. All 130,000,000 tokens are accounted

for - 60 percent for citizens, 30 percent for developers, and 10 percent are reserved. This year, Asterion will form the core of this space, including its Avatar."

Hovering over nearly 5,000 members, the Asterion Space community has seen much growth. The company's goal is to reach 100 million users by 2025.

"In addition to this new bitcoin-based technology, we are introducing the Bank of ASTERION," says Ales Erbr, Co-founder. "This will provide users with a variety of services at a global level in the cryptosphere. It is an investment crypt bank that will offer a share of the profit. Users will be able to buy shares of companies that exist as a part of the bank's current

portfolio. They will use state-of-the-art security features to prevent theft or loss of resources."

Managed in partnership with Asterion Space, the bank will handle all the resources of users. Given the history of Asterion Space and trends in bitcoin cryptome, Investors will be happy to know they have the opportunity to value their resources a thousand times over. It is predicted that the value of the Asterion or square meter token in this world may be several thousand dollars in the future.

About Asterion Space

Asterion Space is an open-source initiative to build a virtual reality world. It uses blockchain technology to claim and transfer virtual land, keeping a permanent record of ownership and will enable to create virtual communities in near future. A public VR world should be ruled by open standards, shielded from the agenda of any central organization. In Asterion, users are land owners and have full control over the content of their land. To make this possible, Asterion uses blockchain technology as a permanent immutable record of ownership.

Asterion Space Token ICO Enters Second Phase, to build New Virtual Citizenship

(January 30, 2018) – Asterion, the new virtual reality community where citizens will live without a central governance, has entered the second round of its ICO of the Asterion token. The first round (ATR 1) has successfully finished by selling its entire corpus of 100,000 tokens, and the ongoing ATR 2 (with 150,000 tokens) has now sold over 100,000 tokens.

Asterion Space takes virtual citizenship into a new dimension. The virtual world is a decentralized community where everyone is in control of respective issues, and interactions and transactions are powered by distributed computing and blockchain. The platform is open source, and deploys smart contracts to empower every individual in the voting process. Each token is priced at USD1, and proceeds will go towards developing the virtual world and promotions. Post ATR 2, the next round of ATR T will begin.

Asterion will enable participants to invest in a wide range of avenues, such as their profession, land areas, services, malls,

banks or public services. The Asterion space will comprise users who in the near future will live in virtual communities as land

owners with full control over their titles, and shielded from central organizations. Another potential activity is aiding scientific research using the Asterion computing network for carrying out massive computing.

"We are creating and realizing a new strategy for the trajectory of humankind. The Asterion Space is for everyone who wants to be part of something new, something revolutionary. Asterion World will offer unique opportunities to combine virtual entertainment with real investment and entrepreneurship. No matter your aggregated wealth, everyone has equal rights in our world," says a spokesperson from Asterion.

The new Asterion community is open to everyone who wants to live a new way of life. To participate, users can create an Asterion account and upon approval take on official citizenship of Asterion Space. Tokens can then be bought using Bitcoin to be sent to the Asterion fund. All tokens are then transferred to the user's Asterion wallet, or to their preferred wallet.

As Asterion citizens, participants will have voting rights, and will influence social and virtual industries around the world. The supporter package also offers VR World Citizenship, a Virtual Passport and voting rights. The Asterion team is currently working towards expanding its virtual world to create an international community, a citizen's social network, an Avatar software, a business incubator, the Asterion World University, and an Awards ceremony for the launch of Asterion Space.

Asterion Space believes that civilization has reached a collective understanding of the value of human capital, as well as the creative power of personality in the development of a new society.

This understanding will be reflected in the new, post-industrial community basis of the future.
